

## Washing machine programmes.

- AEG-Electrolux has the only **wool programme** in the market with a cool down phase at the end of the wash phase. This prevents chill-shock when the cold rinse begins, ensuring shrinkage is minimised.
- The **silk and lingerie programmes** are designed to care and protect very delicate fabrics, ensuring optimum wash results with maximum care.
- The **delicate programme** is designed for mixed fabrics found in delicate clothes.
- We know washing by hand can be unpleasant, so now there is an extremely gentle programme that allows 'handwash' labelled items to be washed by machine.

## Tumble dryer programmes.

Our tumble dryers dry clothes like the outdoors, indoors, with a range of gentle programmes for unrivalled clothes care. AEG-Electrolux use advanced technology to develop programmes to care for all types of fabric, designed to keep your every need in mind.

- We have a special **jeans programme** for thicker fabrics, ideal for drying the seams of clothes such as jeans.
- There are special cycles with cool air and gentle tumbling so that even delicate fabrics such as wool and silk can be dried with confidence.
- To simply refresh clothes that have been in the cupboard there is the **freshen up option**.
- To dry clothes so they are ready to wear or store there is the **extra dry programme** and the **storage dry programme**.

# Perfectly coordinated.

## Perfectly coordinated.

AEG-Electrolux laundry appliances are perfectly coordinated. This uniform appearance will enhance any kitchen or utility room, with stylish push button controls, innovative LCD and LED displays and stainless steel embossed detail.

## Interior light.

The interior light drum on the L84950 and L86850 washing machines and all our tumble dryers automatically light up when the door is open for greater visibility when loading and unloading. AEG-Electrolux appliances are also easy to load and unload, with large 30cm portholes and 165° door opening.

## Flexible design.

There are two types of AEG-Electrolux tumble dryers, the condenser dryer and the vented dryer. The condenser dryer condenses the moisture back into water and fills a large self-sealed water container that can be poured down the sink. This dryer can be situated anywhere in the home.

The vented dryer expels warm air from the machine via a venting kit. It is essential that this air is vented outside, therefore the appliance must be situated near an outside wall. Vented dryers come with a venting kit consisting of a venting hose and connectors for the appliance and the wall.

## Angled control panel.

Our new control panels are designed to tilt up at a 19° angle - making setting your programmes easier than ever before!
